Summary

Performance-driven Full-Stack Developer with hands-on experience architecting, scaling, and deploying production-ready web applications. Proficient in the MERN stack, TypeScript, Next.js, and relational databases like PostgreSQL. Strong background in engineering secure REST APIs, designing RAG-based AI workflows, managing cloud environments (AWS S3, Docker), and automating CI/CD pipelines to optimize system performance and security.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend Architecture: React.js, Next.js, Tailwind CSS, Material UI (MUI), TanStack Query, Redux Toolkit, Zustand

Backend Engineering: Node.js, Express.js, RESTful APIs, JWT, RBAC, Prisma ORM, Mongoose, Zod Validation, Redis

Databases & Storage: PostgreSQL, MongoDB, PostGIS, Amazon S3

DevOps, Cloud & Tools: Linux/Unix, PM2, Docker, Docker Compose, Git, GitHub Actions, CI/CD, Vercel, Render, Tailscale

Artificial Intelligence: LLM API Integration, Retrieval-Augmented Generation (RAG), Vector Embeddings, Semantic Search, Server-Sent Events (SSE)

Experience

Full Stack Developer Intern

Dec 2025 – Jun 2026

TechPlek Technologies

New Delhi, India

Shailshuta Logistics | *React, TypeScript, Node.js, Express.js, PostgreSQL, Prisma, RBAC*

- Architected and optimized 20+ robust RESTful API endpoints handling critical shipment tracking and customer operations, cutting server response times by 15%.
- Engineered end-to-end JWT authentication and granular Role-Based Access Control (RBAC), securing 15+ analytical dashboard views and shielding protected endpoints from unauthorized access.
- Configured, monitored, and maintained scalable Node.js deployments on Linux staging environments using PM2; implemented automated log rotation and error alerts to preserve 99.9% application uptime.

Digital Signage Platform (PDOOH) | *React, Node.js, PostgreSQL, AWS S3, Raspberry Pi, Linux, Hardware Integration*

- Developed low-latency backend services and a centralized administration console to handle seamless asset distribution and synchronization across 50+ remote digital signage units.
- Integrated Amazon S3 for cloud-based media asset handling, leveraging pre-signed URLs to ensure secure, scalable file transfers and accelerate asset rendering speeds by 25%.
- Resolved critical Raspberry Pi runtime failures by optimizing custom shell boot sequences and device provisioning scripts, reducing the media-player memory footprint by 30% and improving edge reliability.

Projects

ToolStackAI (Full-Stack AI Hub) | *React, TypeScript, Node.js, PostgreSQL, Prisma, NVIDIA AI, Docker, Vector Search*

- Created a scalable full-stack AI workspace processing real-time streaming AI interactions (SSE), multimodal analysis, interactive code sandboxes, and persistent memory states.
- Engineered an efficient RAG pipeline utilizing document vector embeddings and cosine similarity queries, yielding semantic search capabilities that reduced text processing overhead by 40%.
- Hardened platform security using AES-256-GCM token encryption for API key storage and strict schema sanitization via Zod, eliminating vulnerabilities across internal database layers.

Android Home Lab Server | *Linux, Termux, Tailscale, GitHub Actions, PM2, CI/CD, Infrastructure*

- Repurposed legacy Android hardware into an ultra-low-power, self-hosted Linux server environment using Termux to host persistent node services, driving localized infrastructure costs down to zero.
- Established a strict zero-trust private network mesh utilizing Tailscale, enabling secure remote administration over SSH without exposing public firewall ports.
- Automated deployment workflows via custom GitHub Actions pipelines, shifting code-to-production deployment execution speeds from minutes to under 45 seconds using PM2 runners.

Certifications & Coding Practice

- **MERN Stack Development Certification – Ducat, Pitampura:** Completed an intensive, hands-on syllabus centered around production-grade software development practices, architectural patterns, and full-stack integration strategies.
- **Codewars Practice Profile:** Solved over **217+ algorithmic challenges (kata)** focused heavily on JavaScript fundamentals, complex data structures, and optimal time/space complexity patterns.

Education

Bachelor of Computer Applications (BCA)

GNIoT Institute of Professional Studies

2023 – 2025

Greater Noida, India
